

**MACHINE LEARNING**

**Q1 to Q12 have only one correct answer. Choose the correct option to answer your question.**

1. Which of the following is an application of clustering?
- Biological network analysis
  - Market trend prediction
  - Topic modeling
  - All of the above

ANS: d

2. On which data type, we cannot perform cluster analysis?
- Time series data
  - Text data
  - Multimedia data
  - None

ANS: d

3. Netflix's movie recommendation system uses-
- Supervised learning
  - Unsupervised learning
  - Reinforcement learning and Unsupervised learning
  - All of the above

ANS: c

4. The final output of Hierarchical clustering is-
- The number of cluster centroids
  - The tree representing how close the data points are to each other
  - A map defining the similar data points into individual groups
  - All of the above

ANS: b

5. Which of the step is not required for K-means clustering?
- A distance metric
  - Initial number of clusters
  - Initial guess as to cluster centroids
  - None

ANS: d

6. Which is the following is wrong?
- k-means clustering is a vector quantization method
  - k-means clustering tries to group n observations into k clusters
  - k-nearest neighbour is same as k-means
  - None

ANS: c

7. Which of the following metrics, do we have for finding dissimilarity between two clusters in hierarchical clustering?
- Single-link

## MACHINE LEARNING

- ii. Complete-link
- iii. Average-link

Options:

- a. 1 and 2
- b. 1 and 3
- c. 2 and 3
- d. 1, 2 and 3

ANS: d

8. Which of the following are true?

- i. Clustering analysis is negatively affected by multicollinearity of features
- ii. Clustering analysis is negatively affected by heteroscedasticity

Options:

- a. 1 only
- b. 2 only
- c. 1 and 2
- d. None of them

ANS: a

9. In the figure above, if you draw a horizontal line on y-axis for  $y=2$ . What will be the number of clusters formed?

- a. 2
- b. 4
- c. 3
- d. 5

ANS: b

10. For which of the following tasks might clustering be a suitable approach?

- a. Given sales data from a large number of products in a supermarket, estimate future sales for each of these products.
- b. Given a database of information about your users, automatically group them into different market segments.
- c. Predicting whether stock price of a company will increase tomorrow.
- d. Given historical weather records, predict if tomorrow's weather will be sunny or rainy.

ANS: b

11. Given, six points with the following attributes:

point	x coordinate	y coordinate
p1	0.4005	0.5306
p2	0.2148	0.3854
p3	0.3457	0.3156
p4	0.2652	0.1875
p5	0.0789	0.4139
p6	0.4548	0.3022

**Table :** X-Y coordinates of six points.

	p1	p2	p3	p4	p5	p6
p1	0.0000	0.2357	0.2218	0.3688	0.3421	0.2347
p2	0.2357	0.0000	0.1483	0.2042	0.1388	0.2540
p3	0.2218	0.1483	0.0000	0.1513	0.2843	0.1100
p4	0.3688	0.2042	0.1513	0.0000	0.2932	0.2216
p5	0.3421	0.1388	0.2843	0.2932	0.0000	0.3921
p6	0.2347	0.2540	0.1100	0.2216	0.3921	0.0000

**Table :** Distance Matrix for Six Points

## MACHINE LEARNING

Which of the following clustering representations and dendrogram depicts the use of MIN or Single link proximity function in hierarchical clustering:

ANS: a

## MACHINE LEARNING

12. Given, six points with the following attributes:

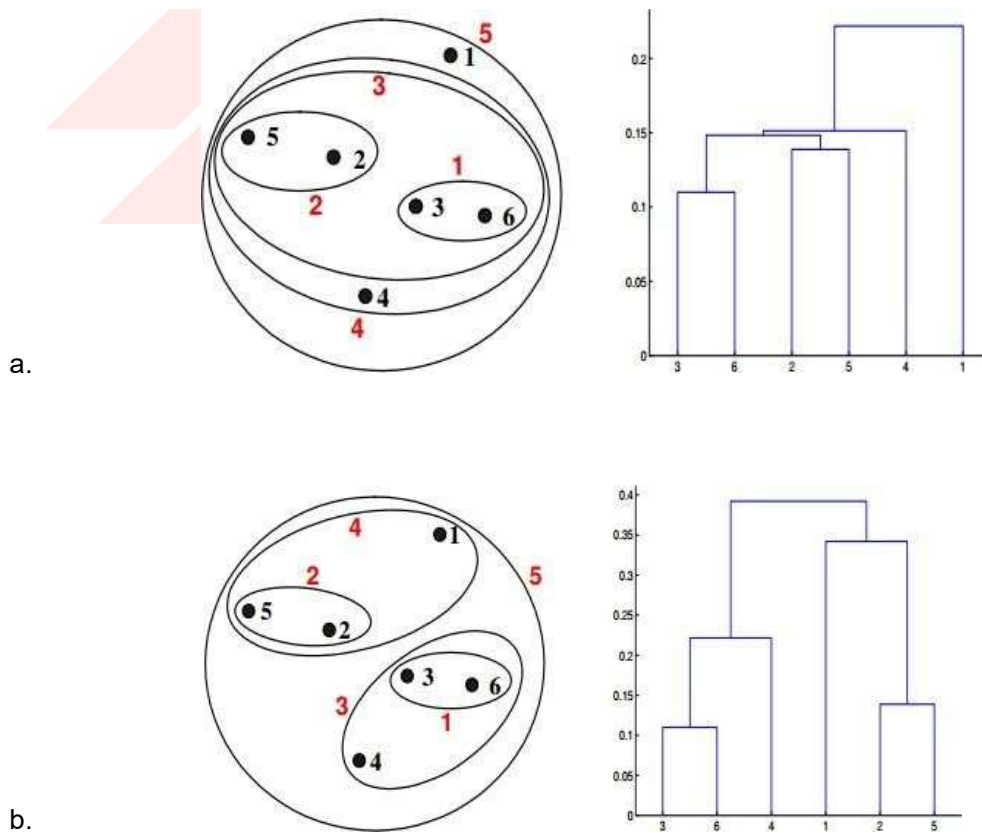

point	x coordinate	y coordinate
p1	0.4005	0.5306
p2	0.2148	0.3854
p3	0.3457	0.3156
p4	0.2652	0.1875
p5	0.0789	0.4139
p6	0.4548	0.3022

**Table :** X-Y coordinates of six points.

	p1	p2	p3	p4	p5	p6
p1	0.0000	0.2357	0.2218	0.3688	0.3421	0.2347
p2	0.2357	0.0000	0.1483	0.2042	0.1388	0.2540
p3	0.2218	0.1483	0.0000	0.1513	0.2843	0.1100
p4	0.3688	0.2042	0.1513	0.0000	0.2932	0.2216
p5	0.3421	0.1388	0.2843	0.2932	0.0000	0.3921
p6	0.2347	0.2540	0.1100	0.2216	0.3921	0.0000

**Table :** Distance Matrix for Six Points

Which of the following clustering representations and dendrogram depicts the use of MAX or Complete link proximity function in hierarchical clustering.

## MACHINE LEARNING

c.

d.

ANS: b

# FLIP ROBO

**Q13 to Q14 are subjective answers type questions, Answers them in their own words briefly**

13. What is the importance of clustering?

Clustering is important in data analysis and data mining applications. Working with large amounts of unstructured data makes it logical to organise the data in order to make it useful in a variety of other ways. Clustering aids in this process. You can acquire a broad view of your data using clustering and categorization. Before delving further into the nitty-gritty investigation, develop some logical structures based on what you discover there. Clustering is a crucial part of machine learning, and its significance is crucial in developing improved machine learning methods.

14. How can I improve my clustering performance?

Graph-based clustering performance can easily be improved by applying ICA blind source separation during the graph Laplacian embedding step. Applying unsupervised feature learning to input data using either RICA or SFT, improves clustering performance
